Primarily written for students at technical universities, it is also a very useful handbook for engineers, PhD students and scientists. Now available at all continents. - - - This textbook introduces the reader into various root finding methods and into methods for solving linear equation systems and series of such systems, along with the minimisation of computation time, required memory and selective computation of only required unknowns. - - - These methods are important because there are many problems in engineering practice and science that cannot be solved without them. Some methods are already implemented in calculators and standard program libraries, providing their instant use. However, the use of the described methods gives an opportunity to the reader to take full control over computation, and to apply the method which is most suitable for solving his problem. This approach can make numerical algorithms...
